

CONSTRUCTION OF FLOOR ITEM

1. Use wood, plywood or plastic sheets that are approximately 0.5 cm (1/4") thick.
2. Cut the following sections from the sheet. (Notice that you will need 2 of Section C.)
3. Assemble the 4 sections as shown in the picture.
4. Use glue or small brackets to hold the sections in place.
5. Cut away any excess material so that the sections fit together better.
6. Use wood putty or filler to seal up the cracks and gaps between the sections.
7. Sand or file away material to make as smooth an interface between the sections and the floor as possible.
8. Fill the inside of the Floor Item with putty, foam or plaster to hold it together and give it some weight.
9. Paint the surfaces flat black.
